(614) 692-9408

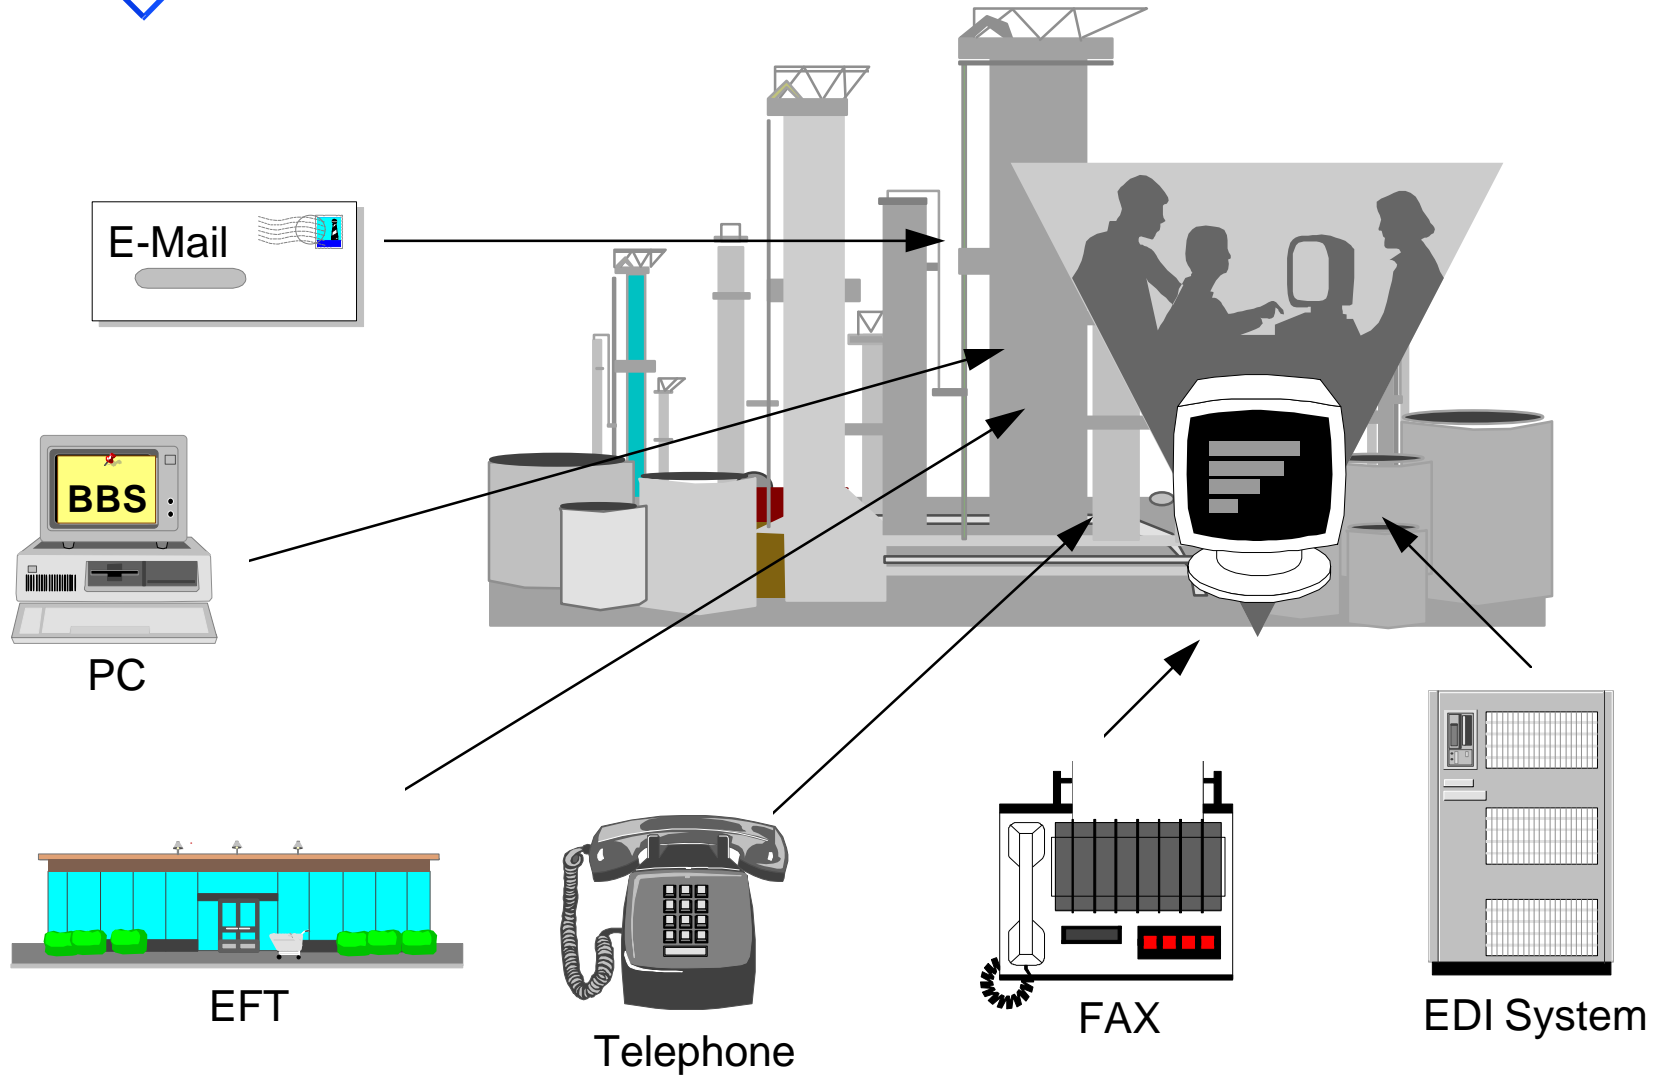

Session Objectives

Electronic Commerce

Electronic Data Interchange

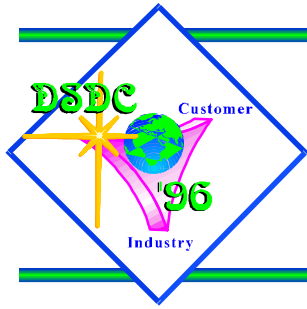

- EDI is the exchange of structured, standardized, information between computer applications

Key Points:

- application to application transfer
- key business data
- standard format
- via communication link

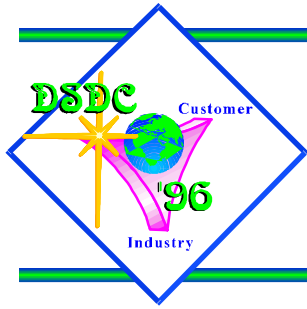

No Manual Intervention

Benefits of EDI

- Increases business opportunities
- Improvements in quality
 - Better record-keeping
 - Fewer errors in data
 - Reduced processing time
 - Less reliance on human interpretation of data
 - Minimized unproductive time

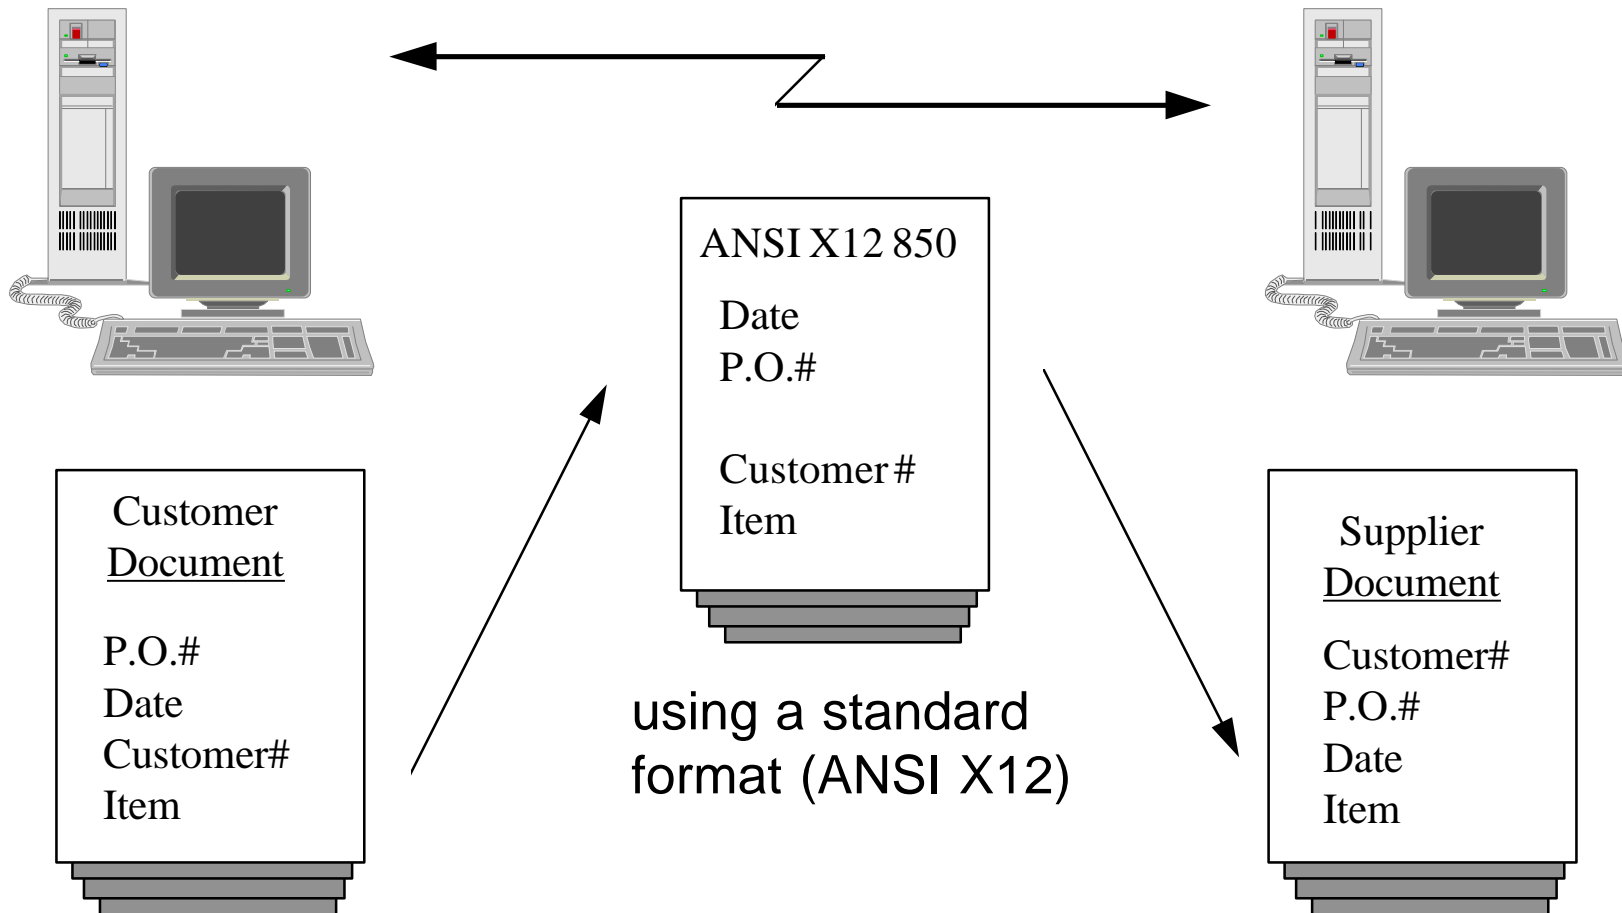

Benefits of EDI (Continued)

- Reduced inventory
- Lowered mailing costs
- Reduced order time
- Faster billing
- Better information for management decision making

Electronic Data Interchange

EDI Transaction Flow

EDI Basics

What you'll need to know:

- EDI Terminology
- Standards
- Software
- Communications

EDI Basics

EDI Terminology*(Continued)*

- **Application Link**- program which extracts the data from the application's database and may reformat it into what the translator needs and vice versa

EDI Basics

EDI Terminology*(Continued)*

- **User Defined File (UDF)**- a file which may closely resemble the application or database and is used to interface with the translator
 - Outbound - you will take the data from your application and put it into the UDF format. The translator will then convert it into X12 format.
 - Inbound - You will receive data in the X12 format. The translator will then translate it into the UDF format.

EDI Basics

EDI Terminology*(Continued)*

- **Translator** - general purpose device that can take the output of any application and “translate” or reformat the data to the required format and structure of the standard and vice versa

EDI Basics

EDI Terminology

- **Trading Partner** -Any organization with whom you exchange information in order to conduct business

EDI Basics

Customer

Supplier

Supplier

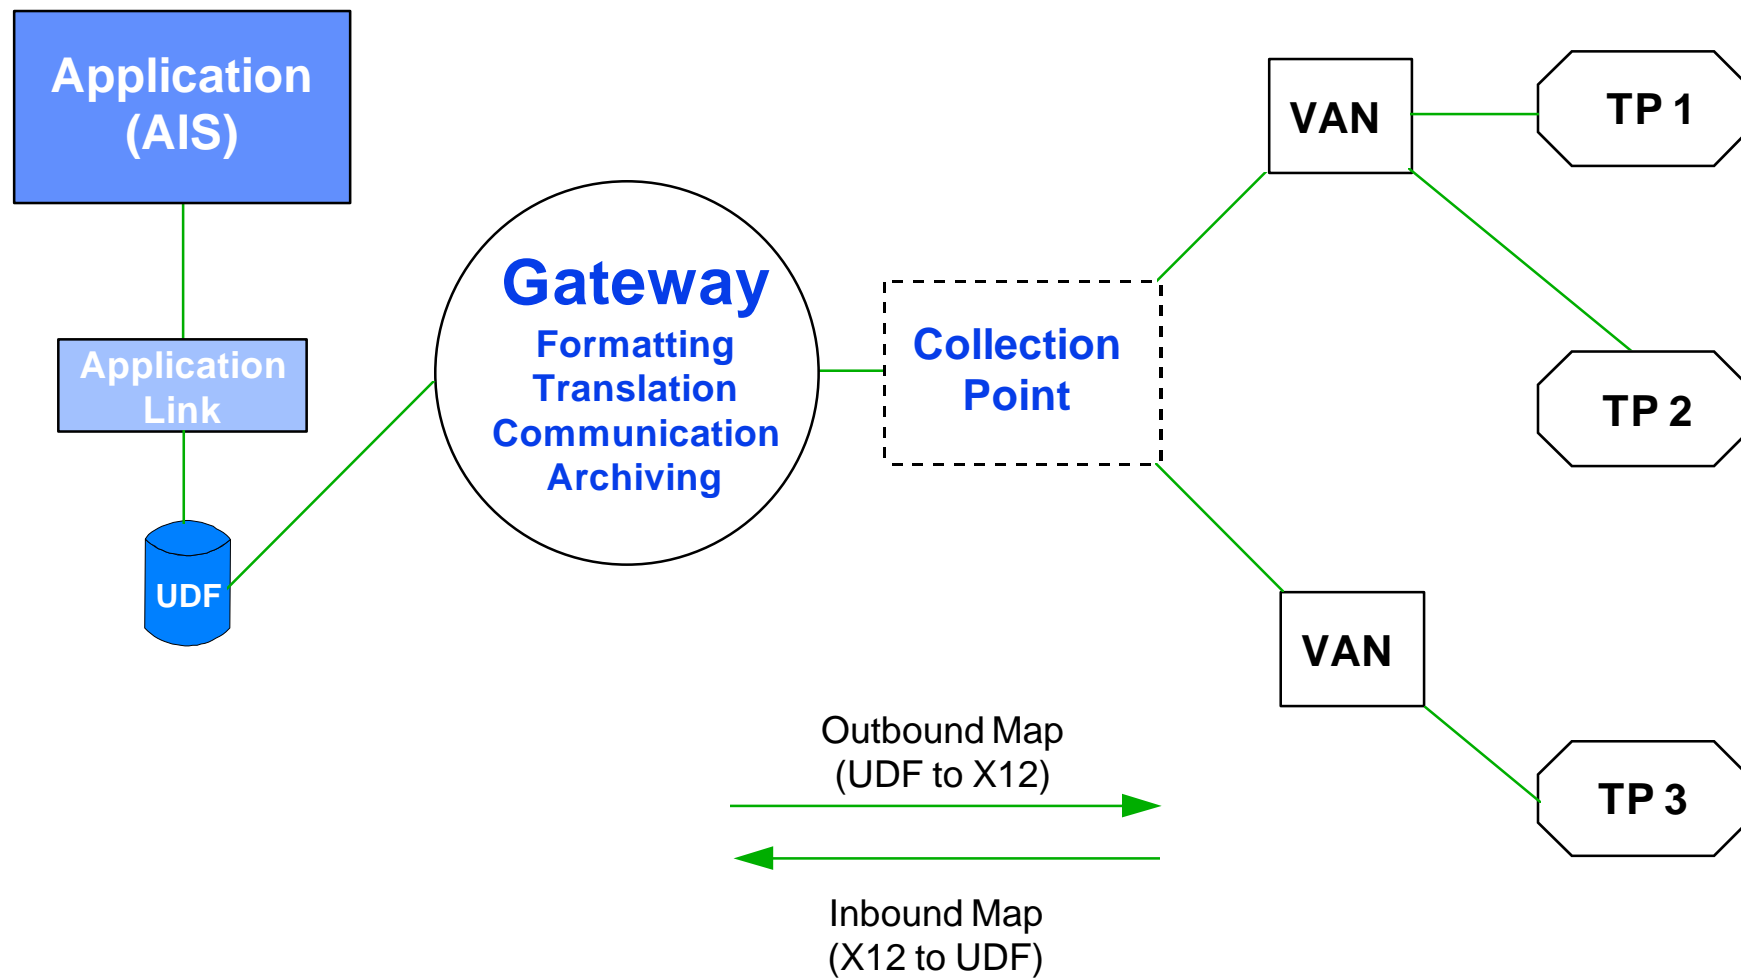

Customer

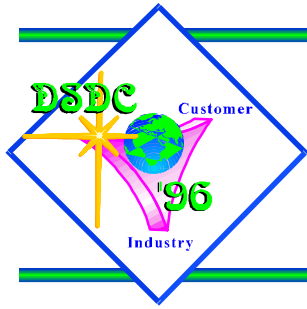

VAN

DLA EDI Workflow

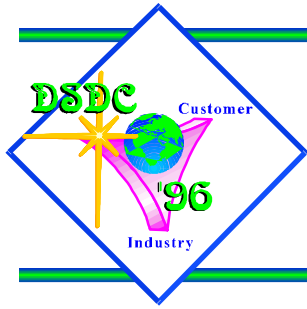

EDI Basics

Trading Partner

- Customer
- Suppliers of Goods
- Suppliers of Services
- Transportation Carriers
- Banks
- Insurance Companies
- Health Care Providers
- Other Government Agencies

EDI Basics

EDI Terminology *(Continued)*

- **Mapping** - An EDI term used to describe the logical and physical process of defining the relationship of proprietary application data fields to their counterpart segments and elements in an EDI transaction set.
(A cross reference.)

EDI Basics

Mapping Guidelines

- What information must be exchanged?
- Where is the source information?
- What are the data attributes?
- What are your trading partner's expectations?
- Implementation Guides from your industry or trading partner may “smooth” the way

EDI Support

EDI Support

TDEO Support

- Overview of the entire EDI process
- Pre and Post processing of files
- Mapping
- Translation
- Archiving
- Testing
- Communication support
- Problem resolution
- Tool Support

EDI Support

EDI Tool Suite

- DSDC GOTS
- Foresight Product
- Sterling Products

DLA Environment Manager

INX (INformation EXchange)

- Long history of EDI experience
- Technical staff to assist during implementation
- Services provided:
 - Pre and Post Processing of files
 - Communications
 - Translation
 - Archiving
 - Error Logging

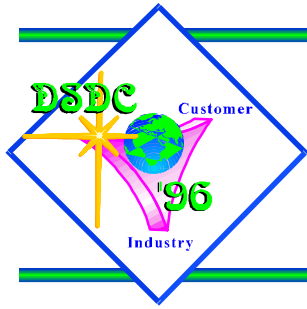

EDI Support - "The Next Generation"

Process Automation Tool (PAT)

- JAVA Language
- Plug-N-Play Architecture
- Windows GUI
- ORACLE 7
- World Wide Web Utilization
- Prototype June '96

EDI Support

Foresight's Edisim provides users with a tool which

- Generates local standards
- Generates Implementation Guidelines
- Generates test data (X12)
- Compliance checks
- Analyzes data

EDI Support

Sterling Products

- Gentran:Excel 2.08
- Gentran:Excel 2.10
- Gentran:Mentor

EDI Support

Tool Migration Support

- Translator Excel 2.08 to Excel 2.10
- Platform to Platform
- Standard to Standard

EDI Basics

Where do I go from here?

EDI Implementation

Steps to Implement EDI

- Establish a project team
- Develop business plan
- Identify functional requirements
 - Complete operating concepts
 - Detail data requirements
 - Determine applications systems modifications
 - Identify and resolve business, legal, and security issues

EDI Implementation

Steps to Implement EDI

- Specify operating requirements
 - Review and complete hardware specifications
 - Identify EDI translation software requirements
 - Establish telecommunications strategy
 - Identify facility and personnel requirements

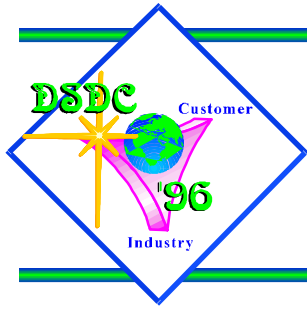

EDI Implementation

Steps to Implement EDI

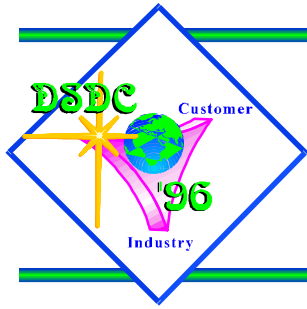

- Review EDI standards and conventions
 - Map data requirements to ANSI standards
 - Develop new or modify existing standards
 - Prepare data conventions

EDI Implementation

Steps to Implement EDI

- Integrate and test system
 - Procure and install hardware and software
 - Modify applications systems
 - Develop interface programs
 - Arrange for telecommunications
 - Update operating procedures
 - Train operators
 - Test, evaluate, and modify system

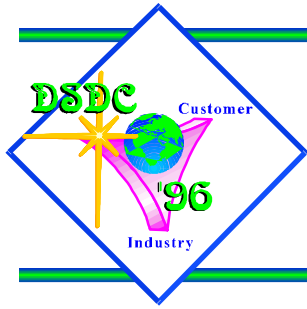

EDI Implementation

Steps to Implement EDI

- Establish trading partner relationships
 - develop trading partner implementation strategy
 - prepare and distribute trading partner information
 - solicit trading partners and execute trading partner agreements
- Implement production system

EDI Implementation

What will EC / EDI cost?

- **Startup costs**
 - Hardware
 - EDI translation and communication software
 - VAN registration and setup (activation fee)
 - Programming modifications
- **Ongoing Costs**
 - Software maintenance / usage
 - Technical support
 - VAN usage charges

EDI: A Success Story
